

## Is your business using the Microsoft cloud securely?

Do you and your employees use Teams to interact virtually, SharePoint to share and collaborate on documents, OneDrive to store business and personal files, or Outlook's web mail?

If so, your business data and proprietary information may be at more risk than you think. And you could be wasting money and slowing things down at the same time as well.

Microsoft takes the security of their platform very seriously, but that doesn't protect you from your own people, who are often performing high-risk actions within these applications on a regular basis, regardless of whether their actions are accidental or malicious.

## Common Cloud Threats

**Compromised Account Credentials**

**Insider Threats, Human Error**

**Excessive User Permissions**

## 3 Obstacles to Cloud Success

### Wasted Money

Extra licenses that are being paid for and not used but charged for monthly by Microsoft.

### Wasted Time

It's very common for the environment to quickly get bloated with data, which can negatively impact performance and productivity.

### Loss of Control

Without regular analysis of your Cloud environments, there's no way to understand risks, contain costs or improve productivity.

## Introducing Tiedata Microsoft Cloud Assessment

Microsoft Office 365 is hands down the most common set of business applications and cloud services used by businesses like yours. That's why we now offer a Microsoft Cloud Assessment and Management service to our clients.

While improving and maintaining your cybersecurity is the primary benefit of our service, we can also help you increase productivity and save time.

### What's included?

- ✓ Monthly Microsoft Cloud environment scan and risk report.
- ✓ Monthly Microsoft Cloud management plan to mitigate any discovered risks.
- ✓ Audit trail report documenting all changes to the environment and who made them.
- ✓ Microsoft Secure Score trend report that compares your business security against benchmarks.
- ✓ Ongoing analysis of cloud environment structure, performance and security.

### Schedule An Assessment Today

Get in touch to ensure your data and cloud environments are secure and to identify strategies to optimise your cloud experience.
